

Position description:

Wind Service Technician – Te Apiti

Reporting to:
Generation Team Lead – Central North Island

Date:
February 2024

The role

Based at our stunning Te Apiti site, in this role you'll be using your electrical or mechanical background to ensure the smooth operation of our wind turbine generators.

Position accountabilities

(What you're responsible for)

- Supporting the wind farm's productivity by leading scheduled service and reactive maintenance on the site (which may involve the use of hydraulic torque and tensioning tools)
- Learning the turbine controls and systems
- Being a competent fault finder in both mechanical or electrical systems
- Maintaining all company vehicles and plant equipment to ensure good operating conditions
- Complying with the site's safety expectations by reporting all incidents, accidents, or near misses and undertaking each task in a manner that ensure you and those around you stay safe
- Having a high standard of workmanship and being a real team player
- Supporting the site's growth by sharing opportunities for continuous improvement
- Being available for on call duties as part of the team roster

Candidate profile

Education / qualifications / knowledge

- Registered electrician, or have an electrical trade qualification
- Trade qualified mechanical fitter
- Hydraulic engineer (trade)
- EAS/EST qualified technician Experience and skills
- Physically fit - able to climb up to 70 metres and lift up to 25kg
- Comfortable working in confined spaces, and – it goes without saying – at height!

Preference will be given the candidates who have a qualification/experience in any/all of the following:

- Any form of wind turbine experience
- Diagnostic or fault-finding experience (electrical or mechanical)
- Trade qualified (electrical or mechanical)
